according to the concurrent engineering research center cerc at west virginia university the concurrent engineering ce is a rapid simultaneous approach where research and development design manufacturing and support are carried out in parallel the mission of concurrent engineering is to reduce time to market improve total quality and lower cost for products or systems developed and supported by large organizations the purpose of the concurrent design methodology is to let the designer know the consequences of his design decisions in the manufacturing and assembly stages as well as in

subsequent operations design for manufacture and assembly design for reliability and testability cad cam cae knowledge based systems cost analysis and advanced material technology are the major constituents of concurrent engineering the need for concurrent engineering can be justified from the fact that in every production cycle the design phase approximately takes 5 to 10 of the total cycle but overall it influences 80 of the production cycle this volume contains articles from a wide spectrum dealing with concepts of concurrent engineering the importance of the knowledge based systems in the ce environment is significant as they provide the common platform to achieve the same level of expertise to the designers and manufacturers throughout the organization for the specific task their role in do it right the first time is very important in providing aid to the designers and manufacturers to optimize the design and manufacturing setups for a cost effectiveness and reduced production time

from the preface the advent of computers has opened new horizons in the field of engineering design in the realm of analysis for engineering design the finite element method has emerged as a powerful tool for modeling and analysis of solids and structures of complex geometries and variable material properties in many areas of engineering design such as machine components pressure vessels nuclear reactors off shore structures steel and concrete buildings bridges towers automobile components turbine parts power plant structures etc the text book literature on the finite element method exists at an introductory level through the new and more advanced level of simple applications modeling and analysis of practical problems continue to be developed and published in technical journals developments are also taking place in the use of artificial intelligence techniques in expert systems to advise the analysts on the choice of the elements type of analysis discretization etc for solving complicated problems it is essential to periodically synthesize all the developments on the finite element method and its applications to practical problems of engineering design and also to identify the future areas of research both in the domains of academic research and industrial applications keeping this in mind an advanced study institute was organized at indian institute of technology madras india during aug 1 10 1988 this volume contains lecture notes prepared by the invited lecturers attending the advanced study institute it should serve as a ready reference to researchers and practitioners engaged in the finite element analysis related to engineering design in several disciplines
