the goal of this open access book is to develop an approach to clinical health care ethics that is more accessible to and usable by health professionals than the now dominant approaches that focus for example on the application of ethical principles the book elaborates the view that health professionals have the emotional and intellectual resources to discuss and address ethical issues in clinical health care without needing to rely on the expertise of bioethicists the early chapters review the history of bioethics and explain how academics from outside health care came to dominate the field of health care ethics both in professional schools and in clinical health care the middle chapters elaborate a series of concepts drawn from philosophy and the social sciences that set the stage for developing a framework that builds upon the individual moral experience of health professionals that explains the discontinuities between the demands of bioethics and the experience and perceptions of health professionals and that enables the articulation of a full theory of clinical ethics with clinicians themselves as the foundation against that background the first of three chapters on professional education presents a general framework for teaching clinical ethics the second discusses how to integrate ethics into formal health care curricula and the third addresses the opportunities for teaching available in clinical settings the final chapter empowering clinicians brings together the various dimensions of the argument and anticipates potential questions about the framework developed in earlier chapters

this volume is the result of a conference sponsored by the medical alumni association of the university of california davis and held in sacramento california in january 2000 the purpose of this conference was to examine the impact of various health care structures on the ability of health care professionals to practice in an ethically acceptable manner one of the ground

assumptions made is that ethical practice in medicine and its related fields is difficult in a setting that pays only lip service to ethical principles the limits of ethical possibility are created by the system within which health care professionals must practice when for example ethical practice necessitates as it generally does that health care professionals spend sufficient time to come to know and understand their patients goals and values but the system mandates that only a short time be spent with each patient ethical practice is made virtually impossible one of our chief frustrations in teaching health care ethics at medical colleges is that we essentially teach students to do something they are most likely to find impossible to do that is get to know and appreciate their patients goals and values there are other ways in which systems alter ethical possibilities in a system in which patients have a different physician outside the hospital than they will inside ethical problems have a different shape than if the treating physician is the same person

ethics the heart of health care a classic ethics text in medical health and nursing studies is recommended around the globe for its straightforward introduction to ethical analysis in this third edition david seedhouse again demonstrates tangibly and graphically how ethics and health care are inextricably bound together and creates a firm theoretical basis for practical decision making he not only clarifies ethics but with the aid of the acclaimed ethical grid teaches an essential practical skill which can be productively applied in day to day health care completely revised and updated this third edition presents an expanded theory of ethics section and includes comprehensive and contemporary examples and case studies newly covered are introductions to rights in health care ethics the ethics of care intuitionism privacy euthanasia suicide and consent and an extensive faq section is added

now in its second edition law and ethics in nursing and healthcare an introduction continues to provide all the information nursing and healthcare students need to know about what is legal and how to decide what is right in order to practise safely and ethically graham avery focuses directly on the vital areas such as negligence consent confidentiality and professional conduct with a practical and accessible approach aimed at healthcare students as well as practitioners key features include a new chapter on deprivation of liberty safeguards up to date information related to the health and social care act 2012 and the francis report real life case studies to help students think critically about difficult clinical situations end of chapter scenarios activities with suggested answers to reinforce knowledge qualified as a registered nurse and holding an ma in medical law and ethics graham avery is a lecturer at the university of essex
